

AmericanDG Energy

On-Site Utility

Generating Savings. It's Simple.

We'll help you cut your energy costs. With no capital investment.

A Simple Solution

American DG Energy, a leading On-Site Utility, offers a simple solution to rising energy prices and unpredictable energy costs: buy your electricity and hot water directly from us, at a guaranteed lower price than conventional energy suppliers charge. Our On-Site Utility produces clean electricity and hot water right at your facility – at no expense to you. We make it easier than you could imagine, because we take care of all the responsibility.

The Basics

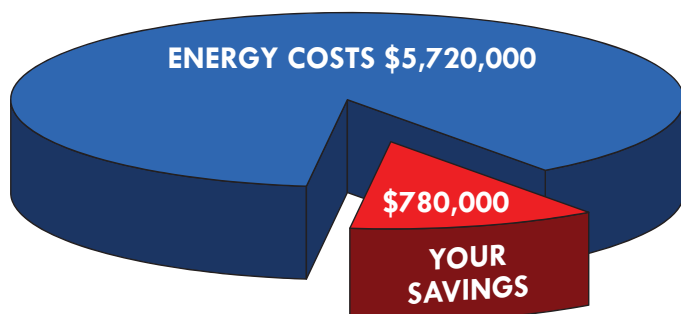

Since American DG Energy owns the On-Site Utility, we pay for the equipment, engineering installation and all operating costs (such as fuel and maintenance). There is no capital cost or budget required. All you have to do is pay for the electricity and the hot water that you use each month, at a rate that's guaranteed to be 5 percent to 15 percent lower than what your local utility charges – guaranteed over the life of the contract. A typical contract agreement ranges up to 15 years, depending on your application. There's no capital investment on your part – we absorb all of the investment risk ourselves.

Proven Green Technology

We use only the most reliable technology on the market today to produce high-quality, clean electricity and hot water through a combined heat and power (CHP) system. Our hot water is available to supplement your existing boilers for domestic hot water applications, space heating, laundries and heated swimming pools. Using this process, we can supply energy with efficiencies near 90 percent, compared with about 30 percent for traditional utilities. Better efficiencies mean lower costs for you and reduced greenhouse gas emissions for the environment.

This proven technology has been deployed at hundreds of sites across the country for more than 20 years. With a nationwide installed base of thousands of units, our technology can easily fit a variety of applications.

Lifetime Savings

Compared to Costs of \$6,500,000 without American DG Energy

Key Assumptions:

NO CAPITAL REQUIRED	
Total kW Installed	225
Electric Rate (\$/kWh)	0.125
Term (yrs)	15

We Do It All

When you outsource your energy to American DG Energy, we really will do it all. Not only will we select the best system design for each location, we'll consult with your facilities team to ensure the transition is as smooth as possible. Once we've installed the system, you can rely on American DG Energy to handle all of the maintenance and service – without any interruption or inconvenience.

American DG Energy's remote monitoring capability gives us 24/7 access to the systems, to ensure optimal performance and maximum reliability. With a network of dedicated service technicians in place, American DG Energy has the service qualifications unmatched by any other supplier.

With the many risks associated with owning and operating expensive on-site equipment, you can see why it's less expensive, more reliable and simpler to let American DG Energy's experienced team do the work.

Here's How to Get Started

If you answer 'yes' to any of the following questions, contact American DG Energy. We'll perform an energy cash-flow analysis at no cost to you, in order to determine if your facilities qualify for our On-Site Utility energy solution.

1. Do you want to cut your energy costs?
2. Do you want to reduce your greenhouse gas emissions?
3. Do you want to conserve your capital?
4. Are your average electric rates above \$0.09/kWh?
5. Do you want fewer headaches?

Call today to learn more about how you can benefit from an On-Site Utility by American DG Energy.

No Cost | No Responsibility | No Risk
Just Savings

Clean, efficient combined heat and power (CHP)

Better for the Environment

Since our energy systems have greater efficiency and can operate 24 hours per day, the potential carbon reduction is greater than most other energy technologies. Over the term of our agreement, a typical CHP system deployed by American DG Energy can offset over 18,000 tons of carbon dioxide (CO₂), which is the equivalent of planting 300 acres of forest land or eliminating the emissions of over 190 automobiles each year.
